AGENDA

What's happening in Blockchain World

Practice capability Overview

IP & Solutions

Frameworks

Key Case Studies

Blockchain is a Distributed Cryptographic Ledger Technology

that maintains a continuously-growing list of ordered records (assets & transactions) called blocks, each linked to the previous

Distributed

Transactions are 'shared' between participants, computations are distributed across participating nodes on the network

Decentralized

No central 'point of control'. Decision making (ex. acceptance of 'valid' transactions) is through a 'Consensus' mechanism between participating nodes. Each node has their own copy of records through replication

Secure

Transaction records are cryptographically secured

Forward Looking and Immutable

Blocks of transactions added to Blockchain in a chronological (timestamped) sequence. Retrospective editing to 'accepted' transactions practically impossible

Permissioned v/s Public

Different implementations with varying degree of access control – Public (everybody sees everything) to Permissioned (offer access control mechanisms)

Smart Contracts

Different Blockchain implementations enable 'definition' and 'programmatic execution' of Smart Contracts between Parties on the Blockchain Network

WHAT'S HAPPENING IN BLOCKCHAIN WORLD

“

BAAS/ Cloud Offerings

Blockchain as a Service allows consumers to use the cloud-based services to develop, use and host their blockchain apps, functions and smart contracts.

”

“

Containerization

Containerization is making it easier for IT organizations to consume a blockchain service being hosted on any cloud platform

”

“

Smart Contract Adoption

Organizations are adopting pragmatic smart contracts to simplify the way conclude agreements, execute transactions and grant authorizations.

”

“

Unconventional Use cases

Apart from the usual use cases, many unorthodox undertakings are gaining popularity on the blockchain.
Ex- MDM on blockchain

”

“

Interoperable platforms

Blockchain interoperability aims to improve information sharing across blockchain systems making it more practical for real world usage.

”

HCL BLOCKCHAIN PRACTICE SERVICE OFFERINGS – POWERING THE FUTURE

HCL BLOCKCHAIN ECOSYSTEM MANAGEMENT SERVICES

ECOSYSTEM MANAGEMENT SERVICES

OPS MANAGER

HCL Blockchain Ops Manager is a Blockchain framework for managing end to end operations of blockchain business network by providing insights on the blocks, transactions, channels, chaincode, API etc.

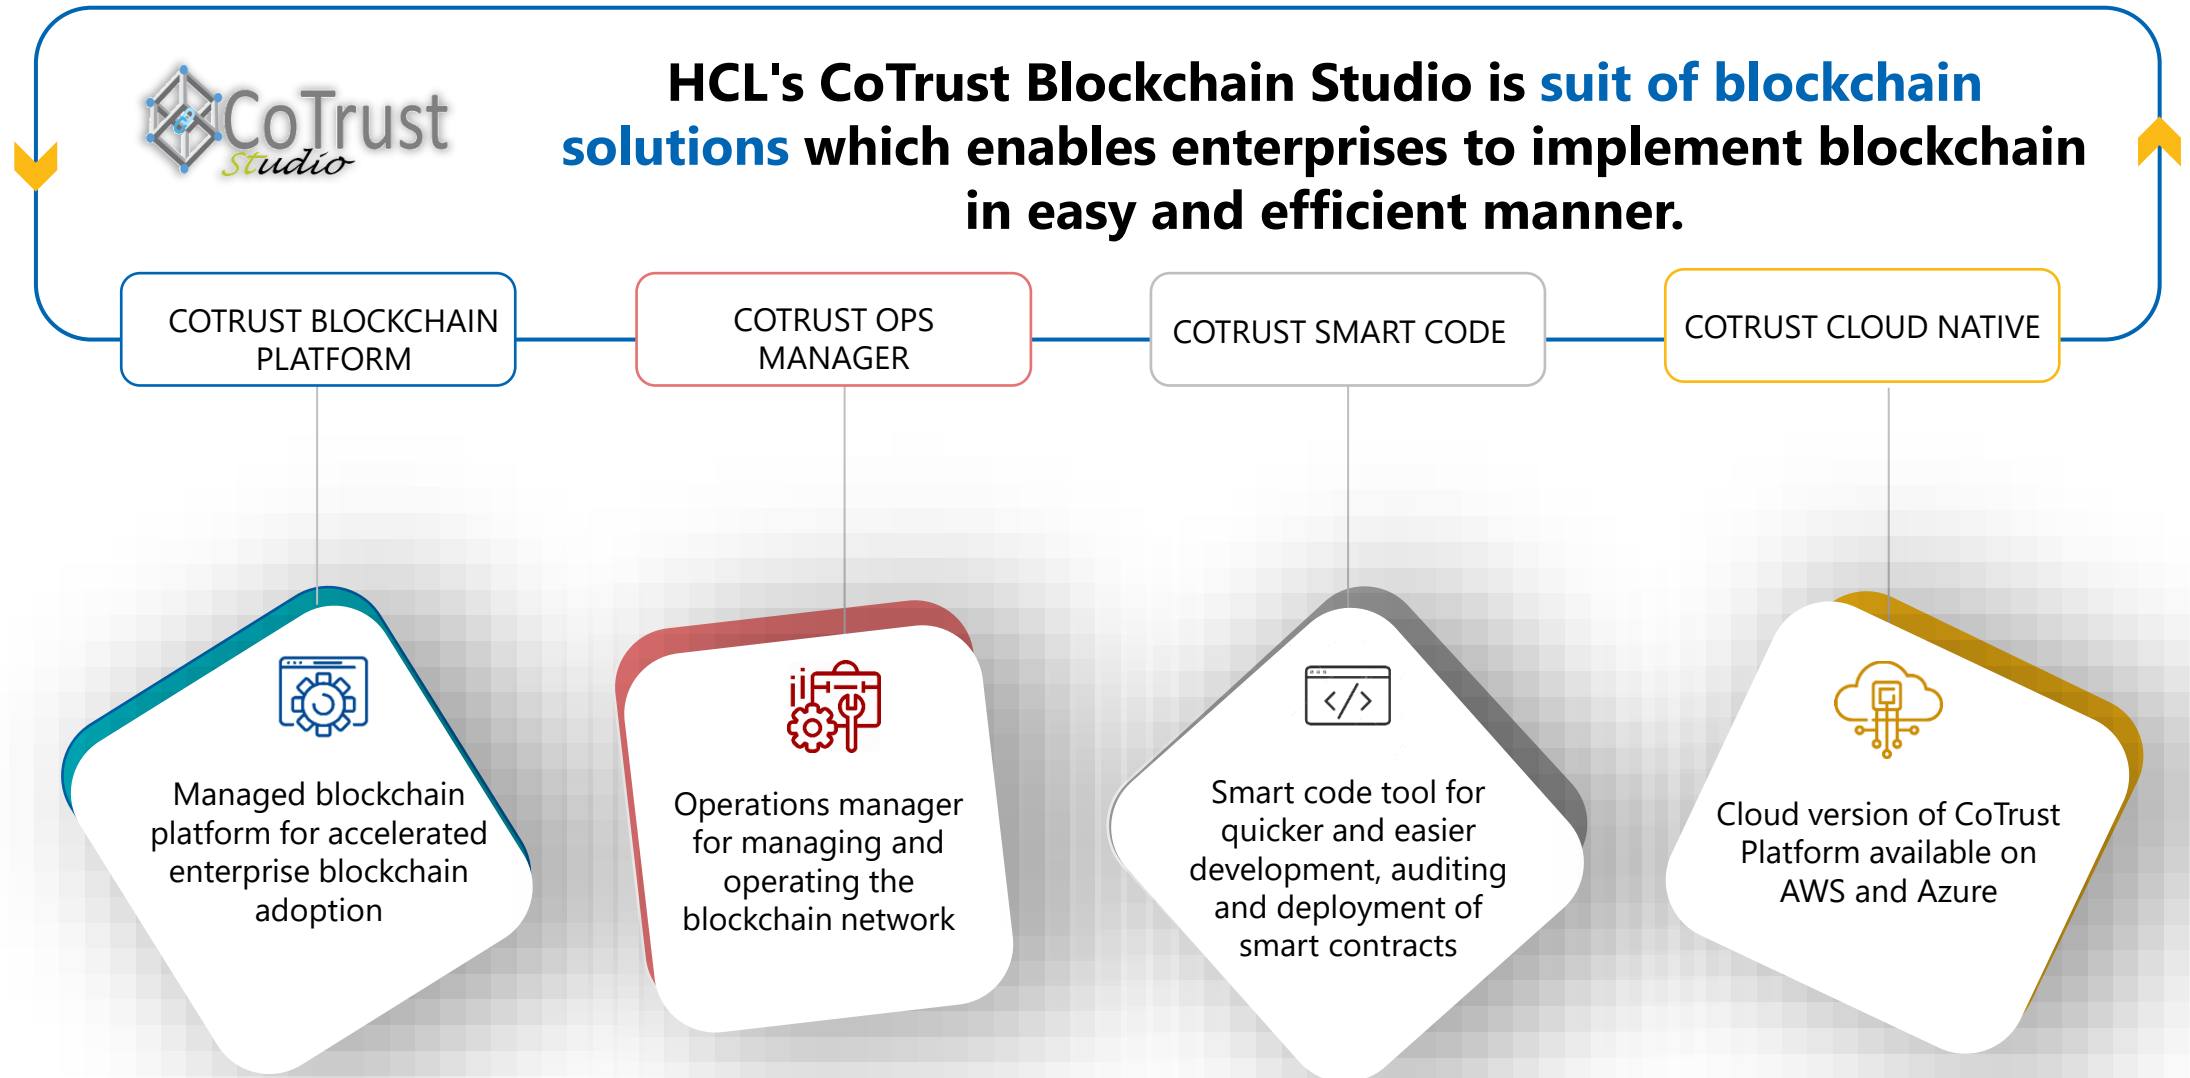

ONBOARDING FRAMEWORK

To effectively manage the on-boarding process, the onboarding framework provides step by step guidance to process, store and share the KYC data and manage certificates on blockchain

NETWORK GOVERNANCE

For both on-chain and off-chain process, we have guidelines to coordinate around decisions and decision-making processes in order to achieve the standardized and clear consensus approach

SOLUTION PORTFOLIO

HCL'S BLOCKCHAIN APPLICATION PLATFORM – COTRUST

HCL's CoTrust Blockchain application platform enables **accelerated enterprise adoption of blockchain technologies**. It **reduces time, cost and risk** by providing foundational capabilities & scaffolding required for Blockchain implementations. It also **brings in reusable business capabilities** & domain specific use-cases. Some of **its key features include:**

**MANAGED
PLATFORM**

**FRICTIONLESS
ON BOARDING**

**END TO END
SECURITY**

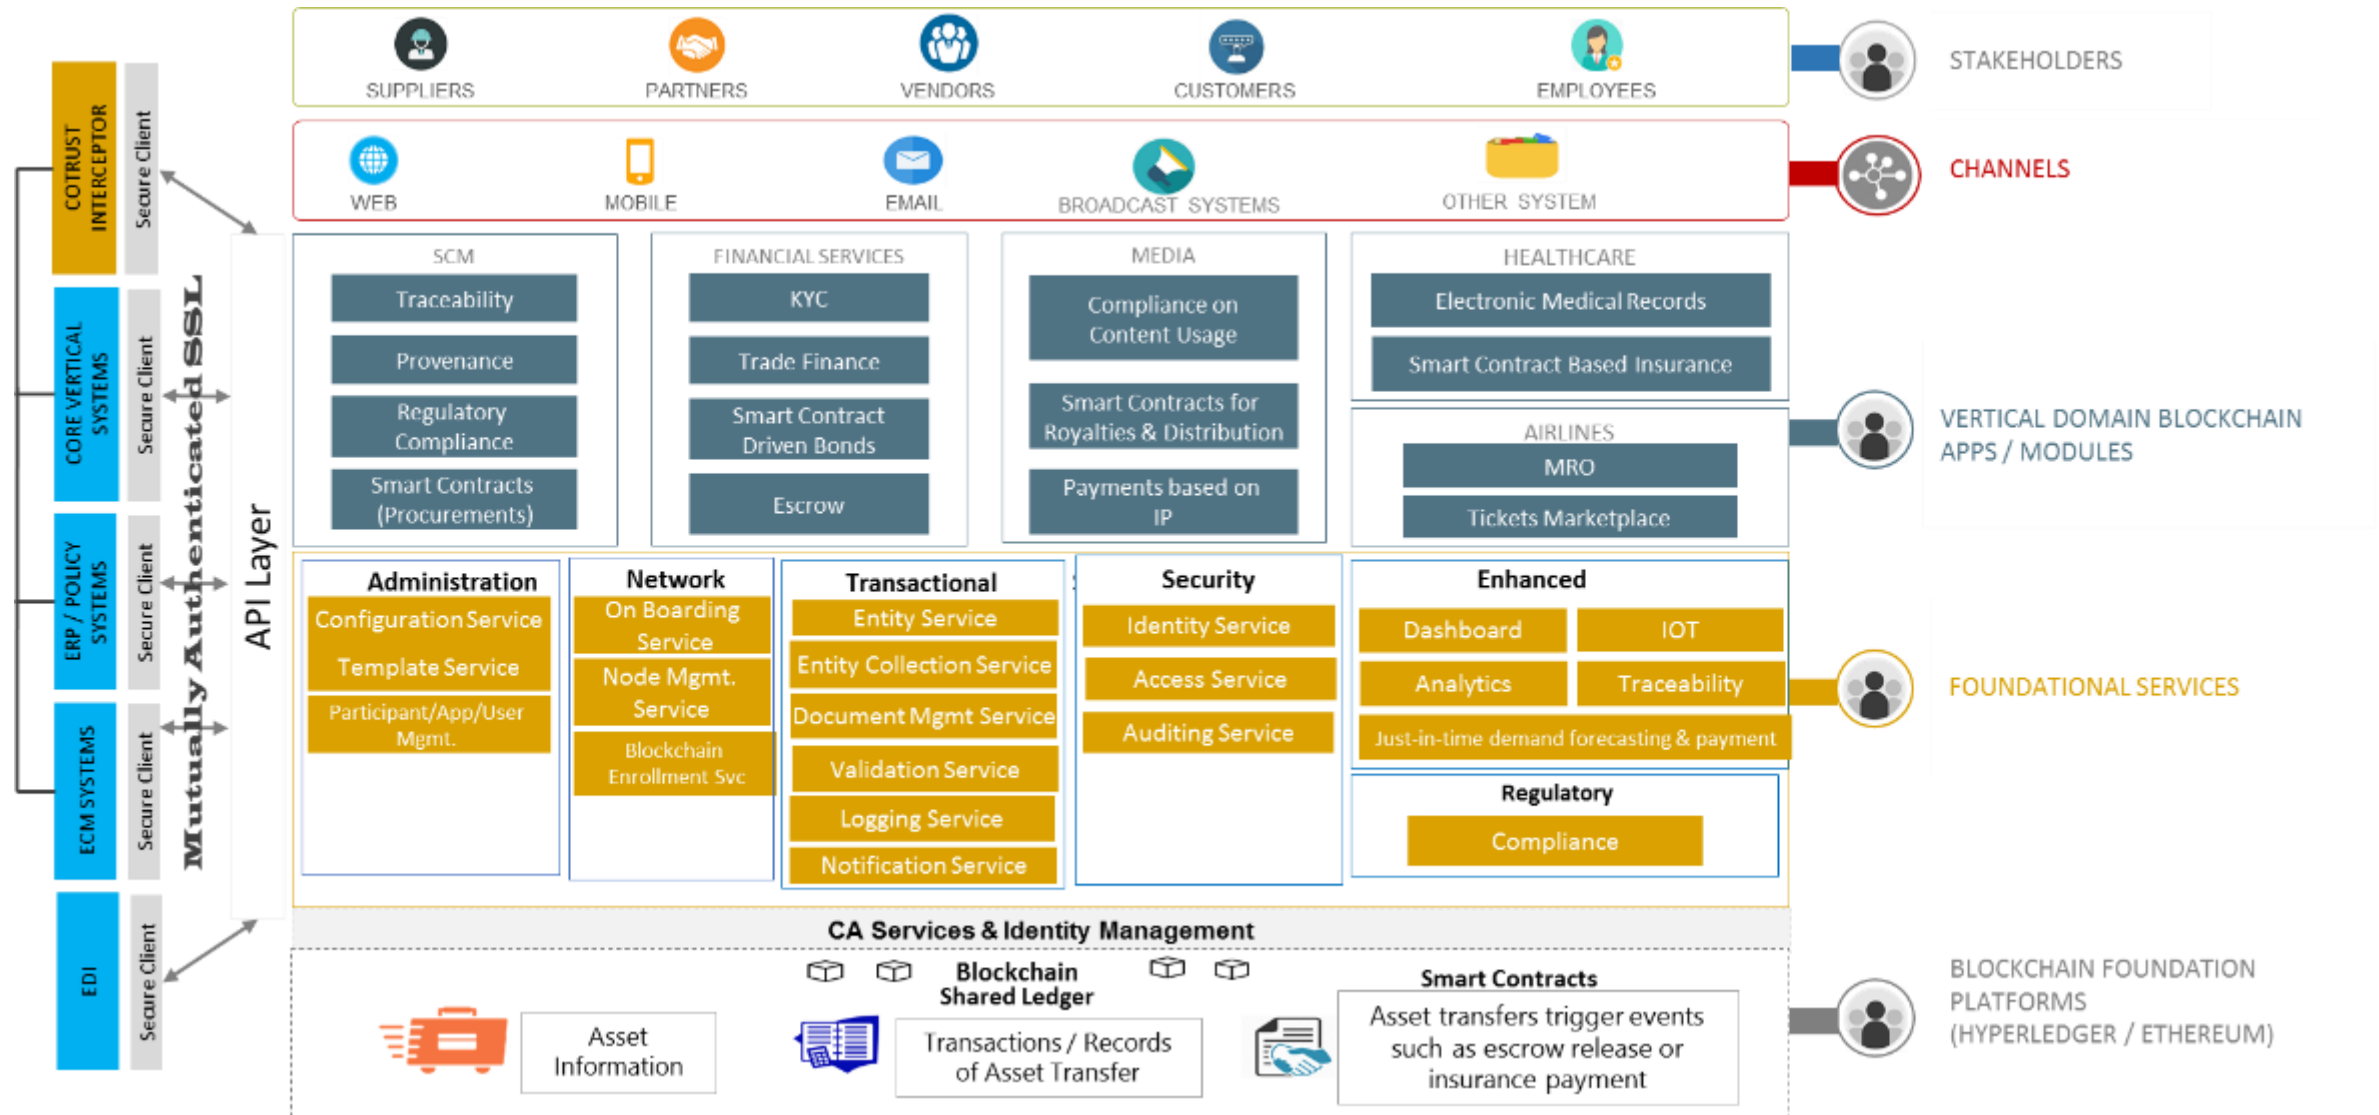

**STRUCTURED
API'S**

**RICH
INSIGHTS**

HCL BLOCKCHAIN APPLICATION PLATFORM – COTRUST

COTRUST- KEY COMPONENTS

API INTERGRATION LAYER

CoTrust APIs are based on Templatzation which enables CoTrust API to integrate with multiple Domain / Industries with no change / minimal change.

DOMAIN SPECIFIC APPLICATIONS

The Business Service layer is a set of services that encapsulates encapsulate Enhanced and Foundation Service to handle Domain specific business requirement, by consuming only specific set of API instead of whole CoTrust platform

INTERCEPTOR

The interceptor module helps CoTrust in establishing communication between different ledgers in easy and efficient manner

FOUNDATIONAL SERVICES

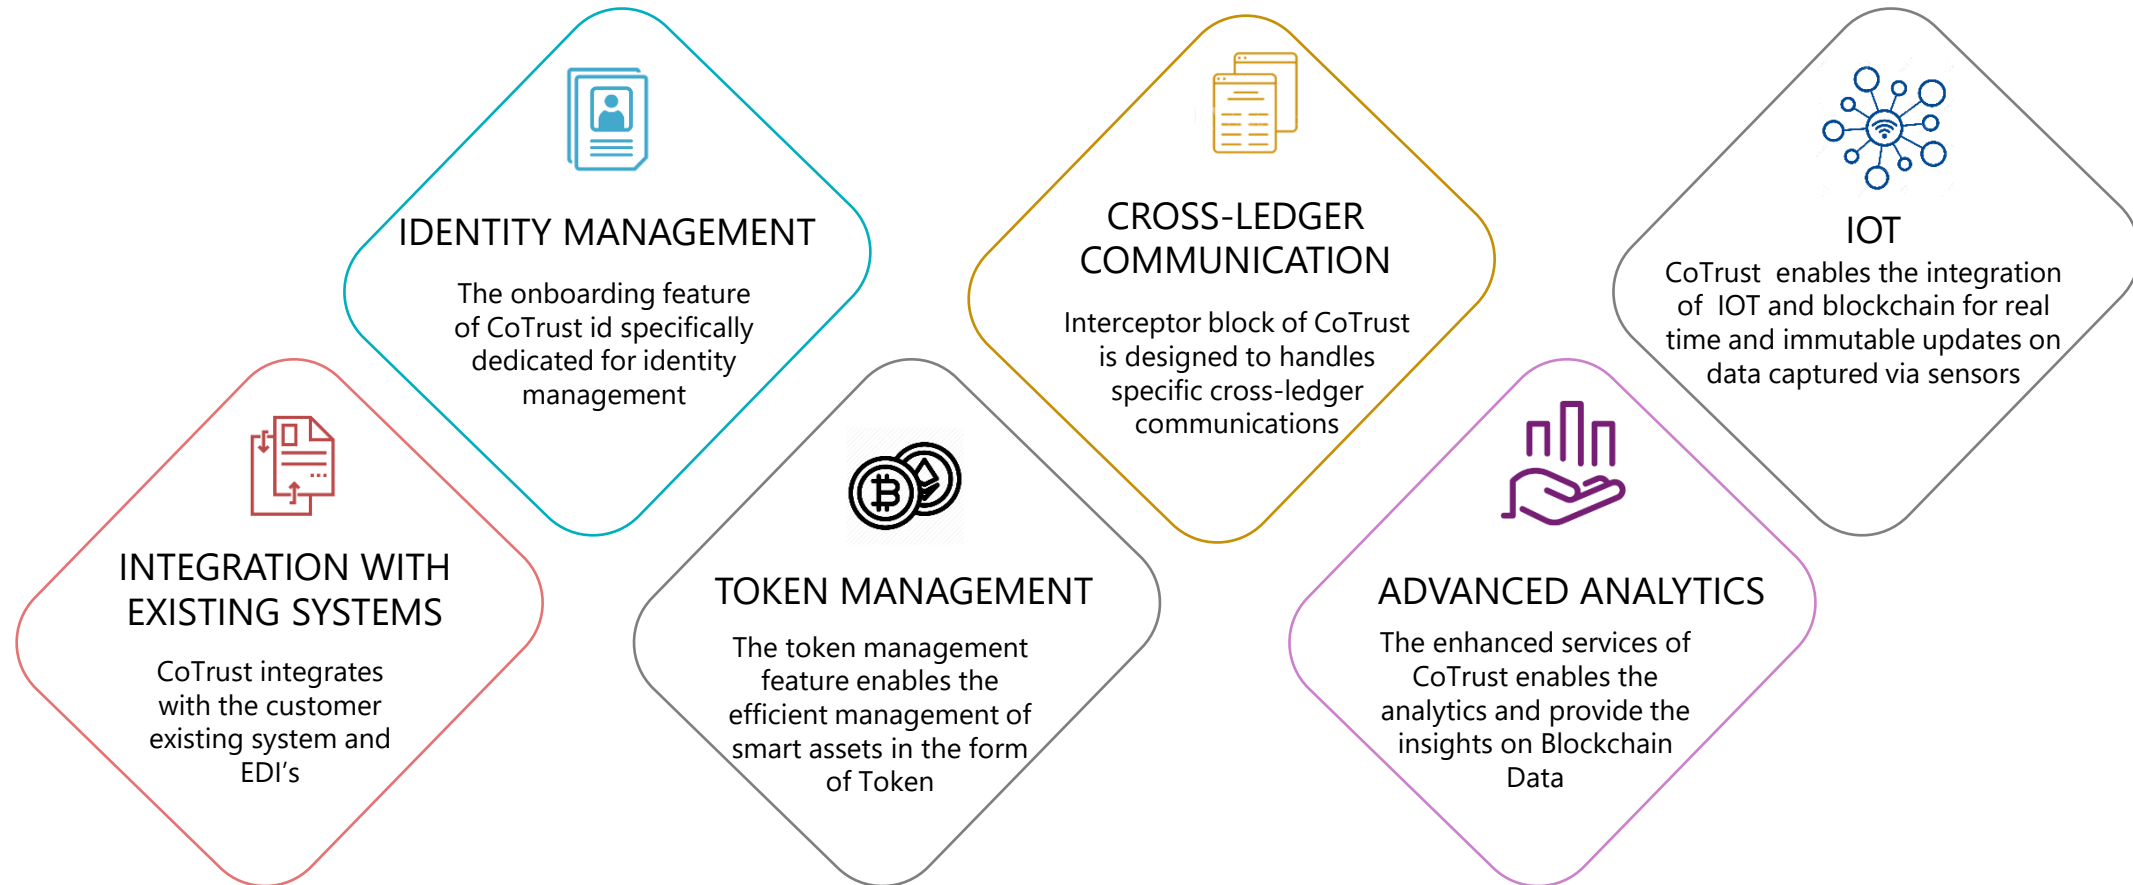

Foundation Services are basic services which enables Domain to handle their basic business requirements. Foundation services are based Micro services architecture which divide the business requirement into smaller services to increase reusability and improve performance.

CHANNELS

CoTrust platform supports multiple channels to expose the services to end users, following set of Channels are supported

- Web Application
- Mobile Application

COTRUST- KEY FUNCTIONALITIES

COTRUST- OPS MANAGER

HCL CoTrust Ops Manager based on Hyperledger fabric, is a Blockchain framework for managing end to end operations of blockchain business network by providing insights on the blocks, transactions, channels, chaincode, API etc.

It is user-friendly web application that helps view & deploy various components of the blockchain Network

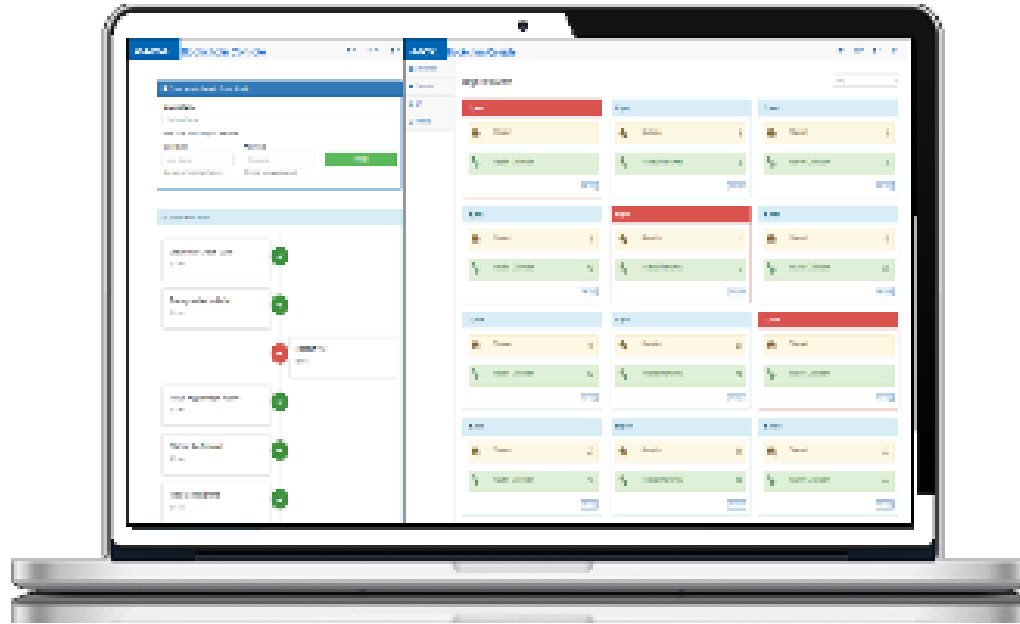

Simple installation on
Hyperledger in On-
premises or Cloud
environment

Manage multiple
networks using this
console

Rich UI and
usability

View the peer logs
through the console

Service API's

Quick Blockchain
Implementation

COTRUST- OPS MANAGER SNAPSHOTS

The interface shows the installation status and configuration options for HCL COTRUST- OPS MANAGER.

Configuration Section:

- Please provide Remote Server details:**
- Network Name:** (Placeholder: Give Some name for your reference)
- User Name:** (Placeholder: Remote server login Name)
- Password:** (Placeholder: Remote server password)
- Install** button

Status of the Install:

- Credential Check Done** (3 sec) [✓]
- Prerequisites Installed** (3 sec) [✓]
- Restart VM** (3 sec) [✓]
- Install Hyperledger Fabric** (3 sec) [✓]
- Started the Network** (3 sec) [✓]
- Initial Check Done** (3 sec) [✓]

The Org1 Dashboard displays the status of 11 peers (peer0 to peer10) in the Org1 network. Each peer card shows the number of Channels and Installed Chaincodes, along with a View Logs button.

Peer	Channels	Installed Chaincodes
peer0	-	-
peer1	3	4
peer2	6	8
peer3	9	12
peer4	-	-
peer5	15	20
peer6	18	24
peer7	21	28
peer8	-	-
peer9	27	36
peer10	30	40
peer11	33	44

COTRUST SMART CODE

DESIGN

Create the flow of the smart contract

Design using drag and drop feature

CREATION AND IMPLEMENTATION

Signoff from the relevant network participants on the draft version of the developed smart contract

Compile the code and generate the executable files

AUDIT

Unit testing and integration testing of the developed smart contract

Automated and Manual Analysis

Audit report generation

COTRUST™ PLATFORM ON AWS MARKETPLACE

CoTrust on AWS

Mercury release involved CoTrust which is HCL's blockchain application platform, which enables an accelerated adoption of blockchain. This was followed by Mars release (v2.0) which added UI based setup and ability to manage the network.

COTRUST VITALWATCH – CAPACITY PLANNING OF CRITICAL MEDICAL RESOURCES

Blockchain based platform to track essential medical resources like PPE, Hospital bed, ventilator etc, at multiple hospitals in various zones. This will help authorities in efficient patient handling and better handling of critical medical resources in pandemic scenarios like COVID.

Key Highlights

- Creating a permissioned network for hospitals
- All marked hospitals providing care during the pandemic to access the ledger to write their resource details i.e. (available/occupied/consumed)
- Smart contract-based notifications on critical asset threshold breach
- Network would have multiple nodes managed by public & private players for improved and regional access
- Multiple zones will be created to ensure regional focus. The solution will ensure separation of zonal data from each other. Via channels.
- Federal government organizations can be part of multiple zones based on their jurisdiction.

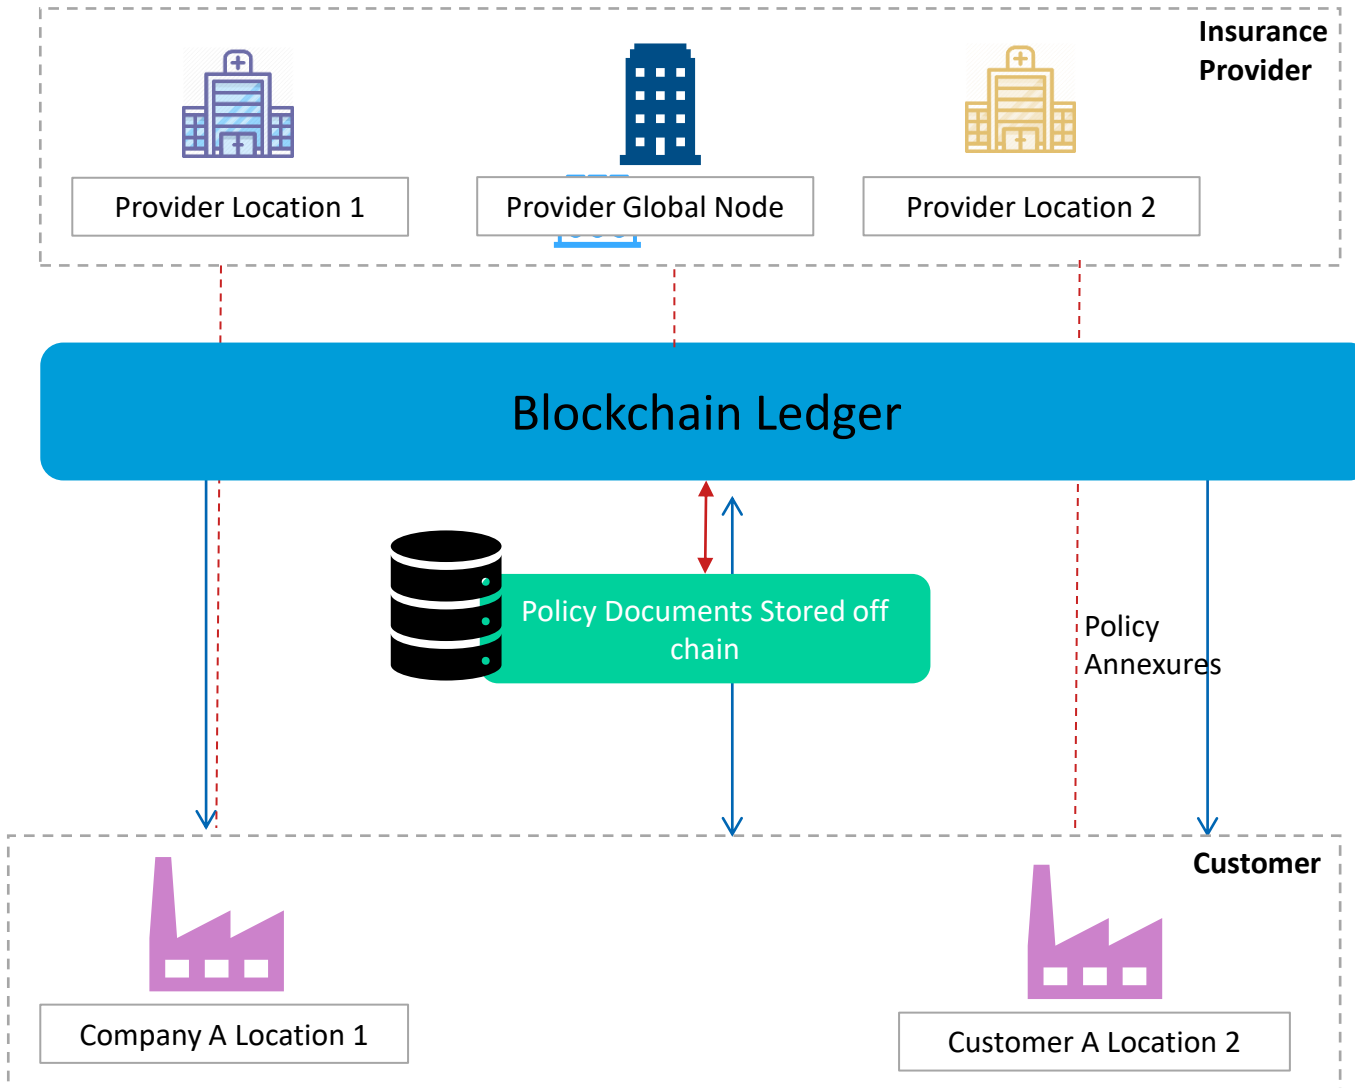

Key benefits :

- Effective critical equipment capacity planning by federal agencies using real time data
- Better patient channelization based on resource availability in the hospitals.
- Immutable transaction records will ensure accountability and thus strengthen the trust in the system

COTRUST BuildingBLOCK – BLOCKCHAIN BASED MNC INSURANCE POLICY MANAGEMENT

**CLICK THE
LOGO** to
view the
offering
On R3
Marketplace

BuildingBLOCK Solution

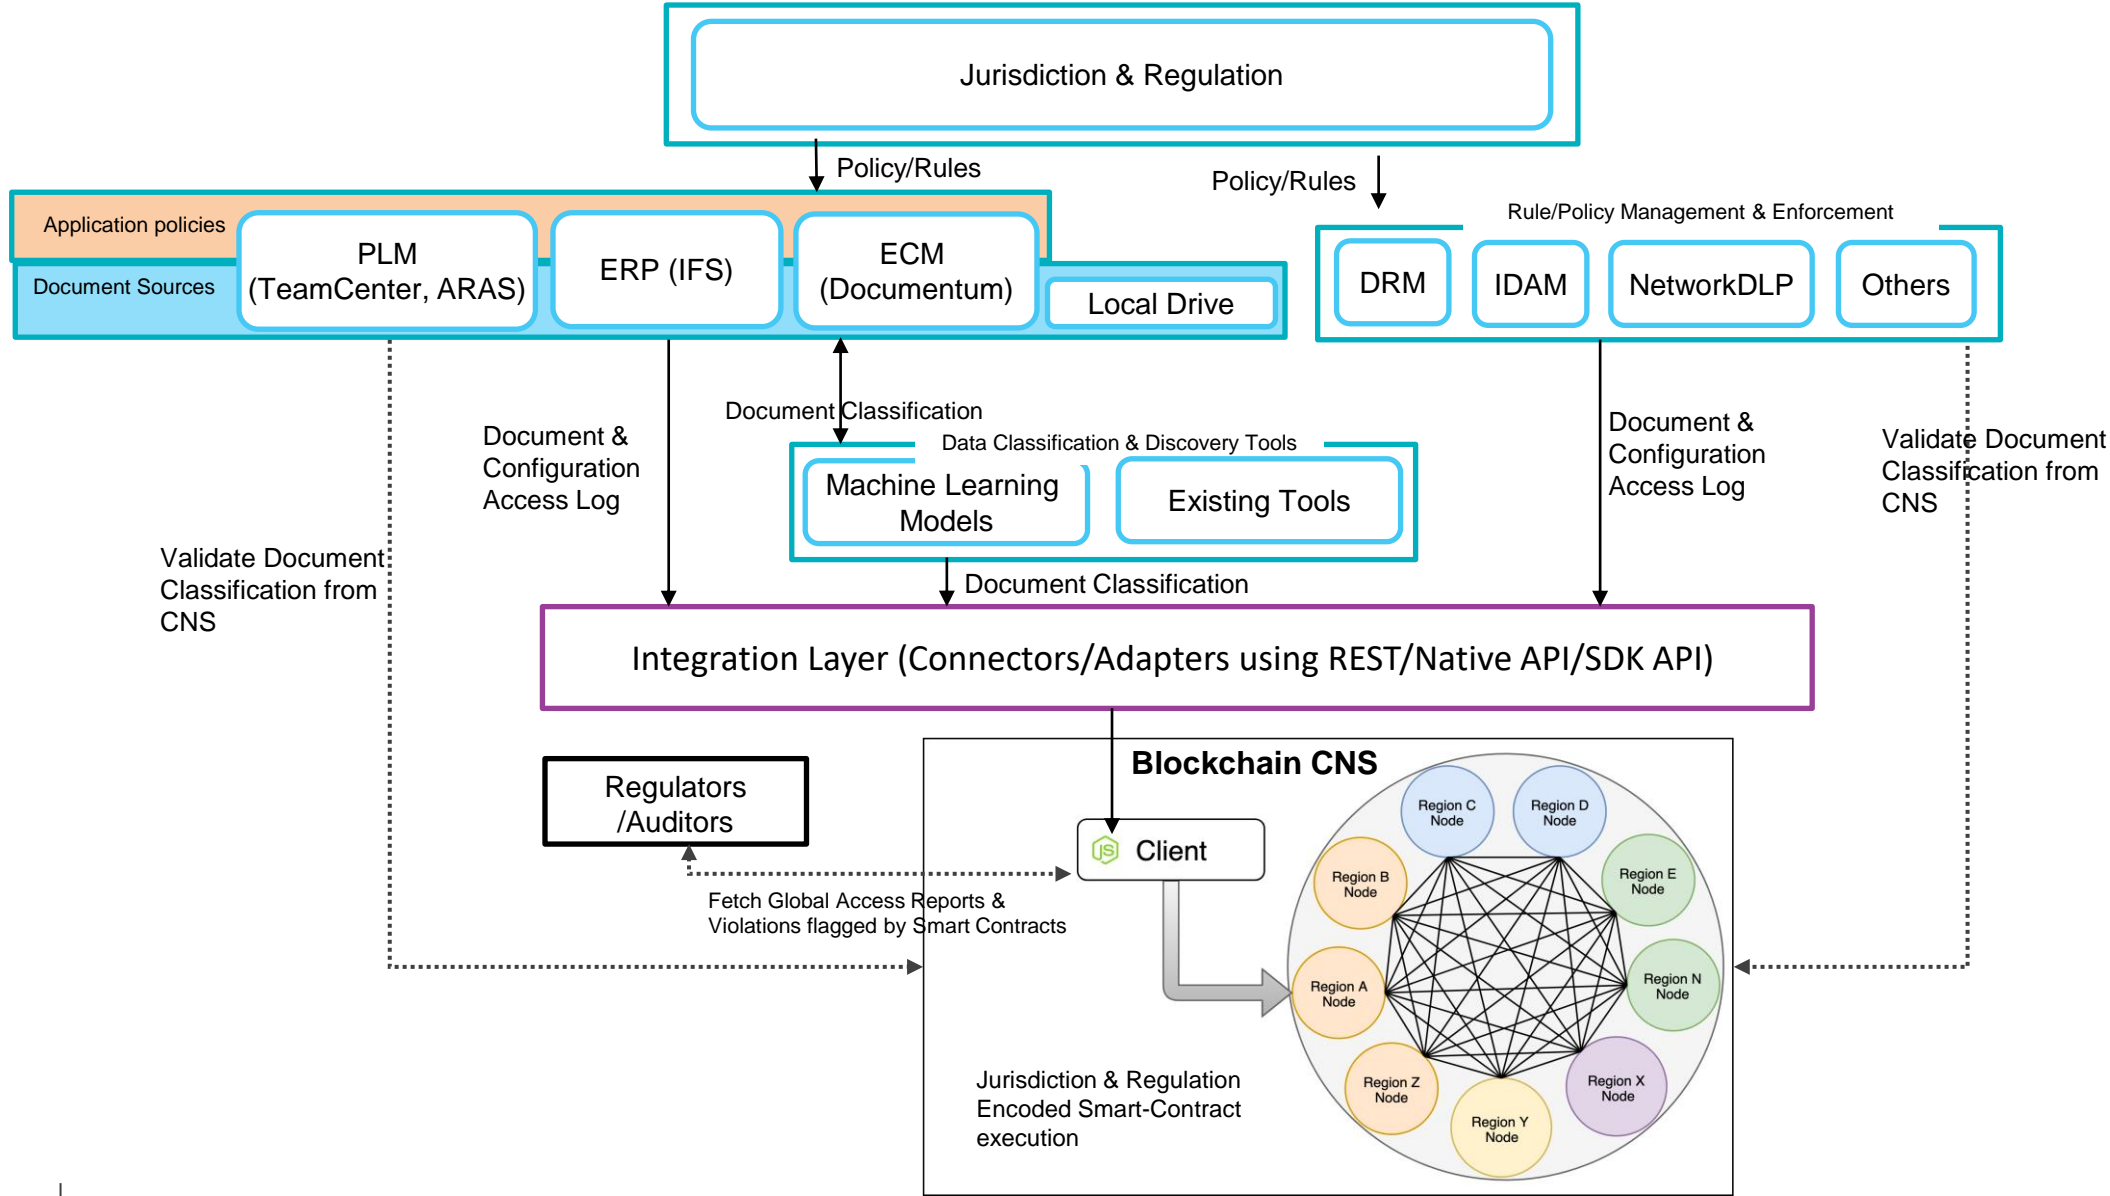

- Provider has a Global Node which initiates a master policy formation
- Provider's local nodes are updated on the new policy formation and requested to form their annexure based on local laws and compliance
- Every location from a customer Geo perspective is mapped to a local node from Providers end.
- Policy documents are stored off chain

Business Benefits

- Directly impacts turnaround time and shortens the policy creation lifecycle
- Intra company use case

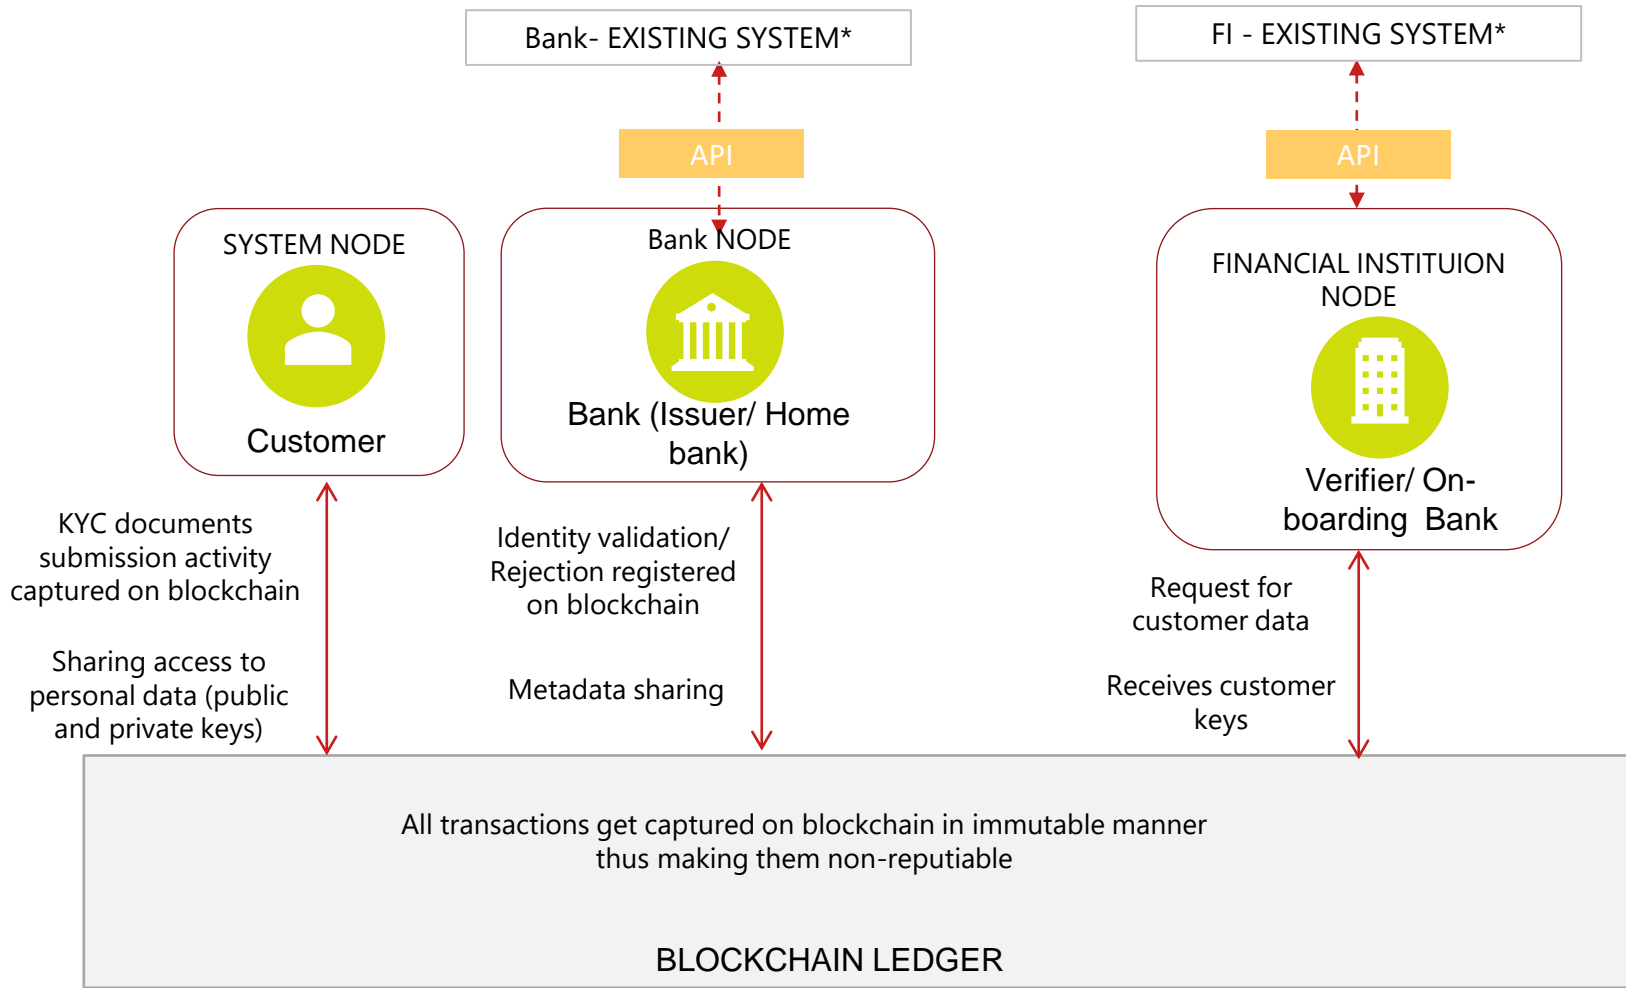

COTRUST BLOCKCHAIN CENTRAL NERVOUS SYSTEM (CNS) – DOCUMENT

WORLD STATE FOR EXPORT COMPLIANCE

COTRUST BlocKYC – KYC MANAGEMENT SOLUTION ON BLOCKCHAIN

Blockchain based network in which Bank, another financial institution and the customer will be participants. Immutable ledger which holds the validated customer KYC data which can be utilized as a single source of truth for any customer data requirements internal or by any other financial institution externally. The PoC will also give control of the data to the customer using custom privacy solution.

SOLUTION OUTCOMES

- Validated KYC data available on shared blockchain ledger in Hashed form, masking it from misuse.
- Self sovereign identity for customer where they will be controlling their data. Solution design mitigates unwanted correlations.
- Data recorded on blockchain uses encryption and hashing to ensure data integrity and privacy

*Any integration with existing system is out of scope

SECURBLOCK - HCL BLOCKCHAIN SECURITY FRAMEWORK

HCL Security framework is a guide to adopt and implement blockchain security regulations and best practices. Some of the high-level principles that HCL Security Framework for Blockchain are

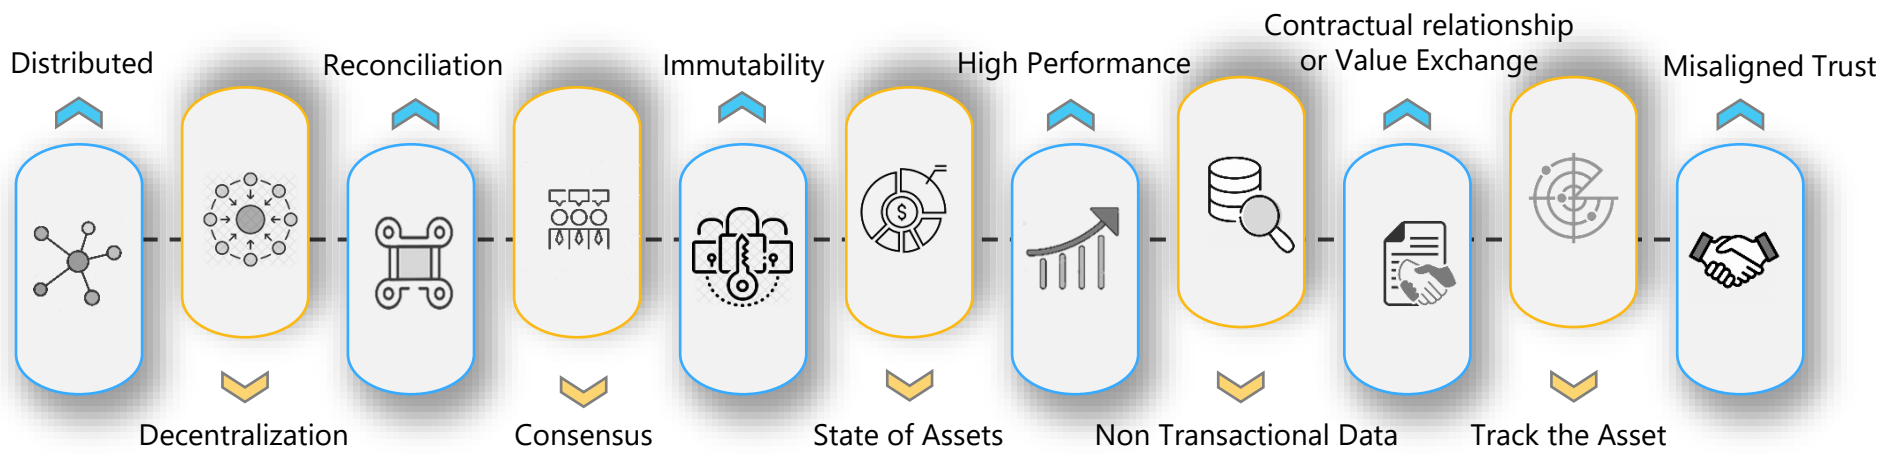

RACE - HCL BLOCKCHAIN USE CASE EVALUATION FRAMEWORK

HCL Blockchain Evaluation framework **assist in evaluating and identify the right use case for blockchain.** It enables **in quick inception analysis of whether blockchain is an appropriate solution for a defined problem.**

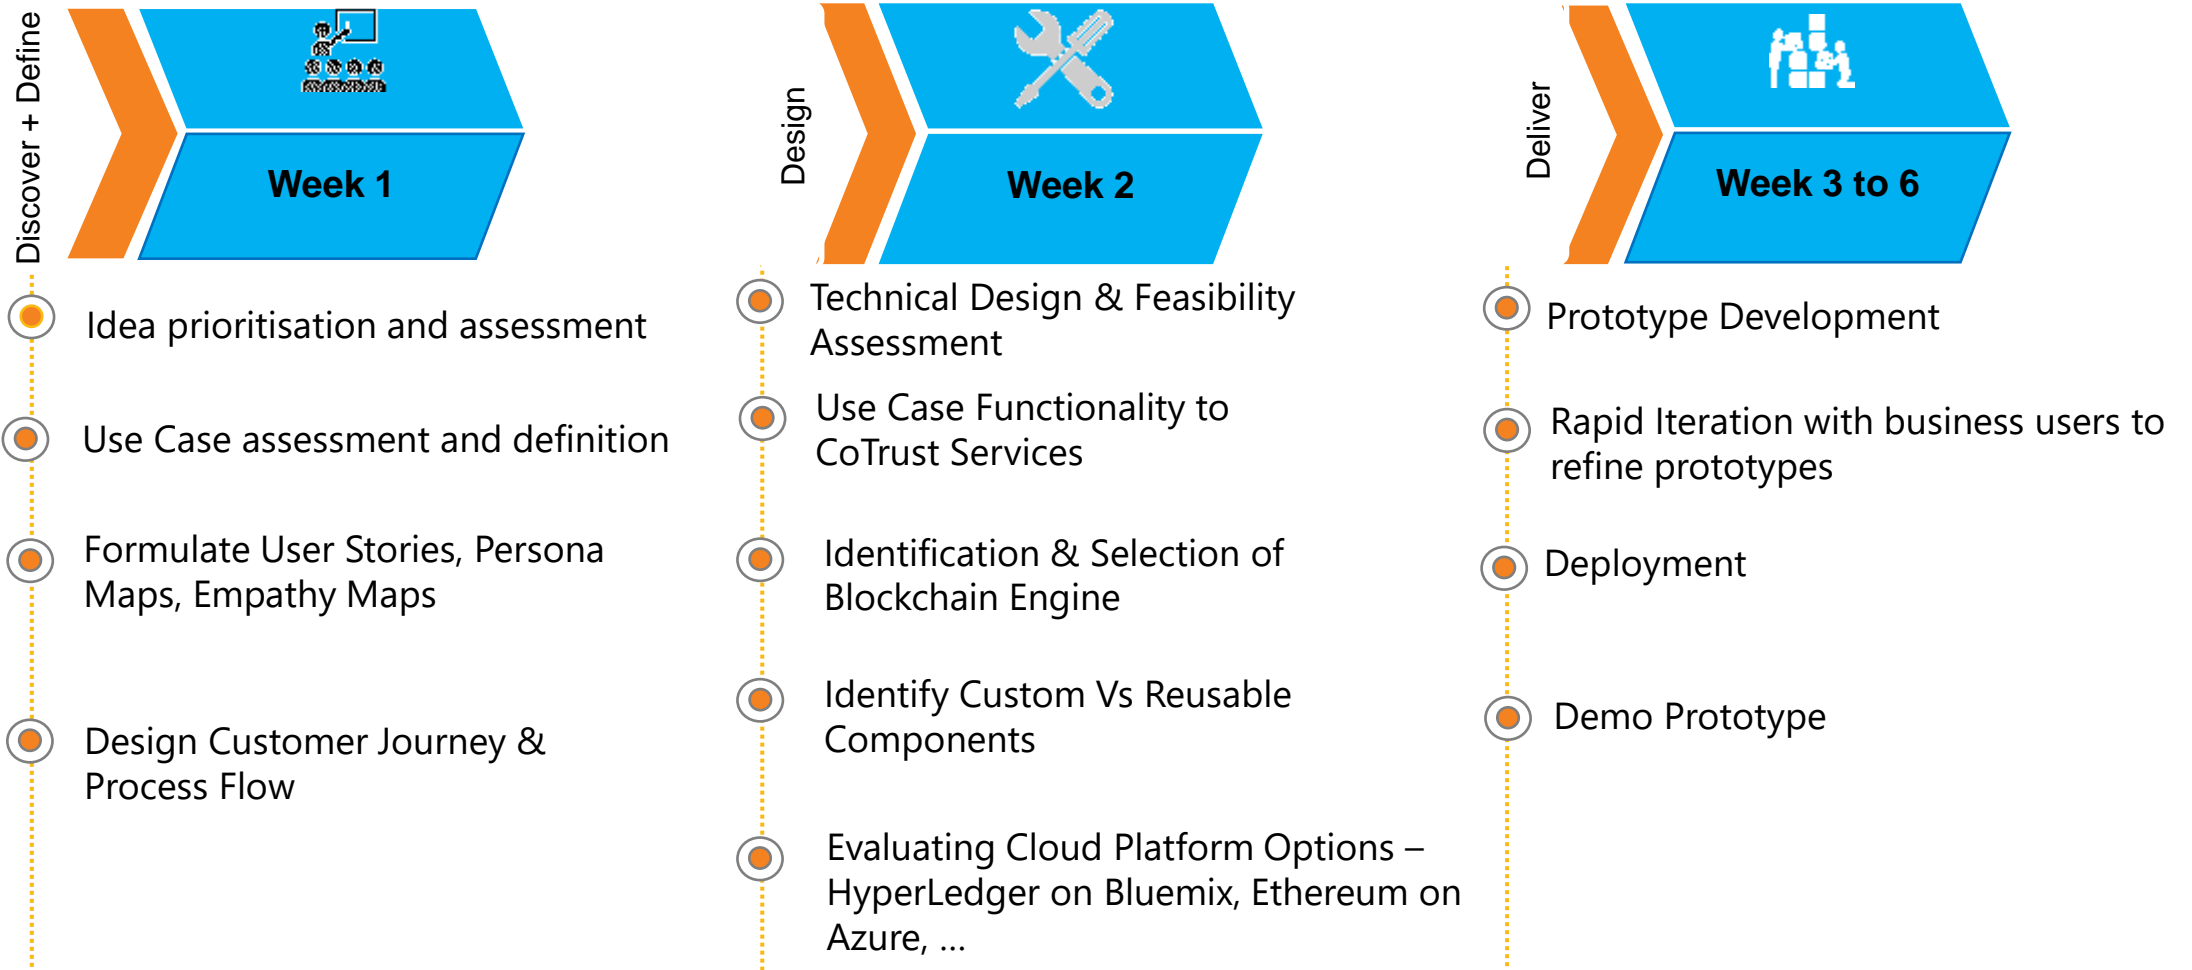

Key Evaluation Parameters

HCL'S DESIGN THINKING BLOCKCHAIN PILOT PROGRAM

- The Design thinking approach is an empathy based creative framework and mindset.
- Design thinking focuses on defining the right problem to solve and generating a use case that solves it.

Process

HCL BLOCKCHAIN KEY USE CASES IMPLEMENTED

BLOCKCHAIN KEY CUSTOMER CASE STUDIES: FINANCIAL

ACCOUNT SETTLEMENT SYSTEM FOR
WORLD'S LARGEST MONEY
REMITTANCE SERVICE PROVIDER

**Implemented faster and
Transparent Account Settlement
and Reconciliation**

using Blockchain by showcasing money transfer from Digital (US Credit Card) to Digital (US Bank Account) using Digital platform. It enabled external Partners with real time visibility into their respective Account balances, thus eliminating error-prone Settlement and Reconciliations

DECENTRALIZED IDENTITY FOR EUROPE
BASED INSURANCE PROVIDER

Built a decentralized digital identity platform for bringing individuals, organizations, ID providers, credit bureaus, notaries etc. on the same platform. Identity Verification and KYC (Know Your Customer) documents related information is stored on Blockchain. This allows Individuals remain in full control of their information.

Verified identity can be shared with organizations, removing the need to go through the whole process again. This can be integrated with any existing on-boarding process/system across domains

ILLIQUID ASSET TRADING PLATFORM
FOR BIG FINANCIAL SERVICE PROVIDER

Trading Illiquid Assets Using Blockchain- Market offering liquidity for such instrument that efficiently connects market participants with marketplace assets and enables the direct transactional exchange of ownership, of the asset itself.

The blockchain based solution offers greater connectivity /accessibility through the transactional efficiencies offered by decentralized infrastructures

DIGITAL LOAN PROCESSING SYSTEM
FOR GLOBAL ENTERPRISE
INFORMATION MANAGEMENT FIRM

Blockchain based Digital Loan Processing platform to bring end to end transparency and easier data dissemination between various stakeholders involved in the resale

The main objective is to allow key participants to oversee, track, verify, and provide real time update on the Loan Certification Process with the use of Blockchain

BLOCKCHAIN KEY CUSTOMER CASE STUDIES: FINANCIAL

IP NOTICES HANDLING SYSTEM FOR CANADIAN INSURANCE COMPANY

Handling Interested Party Notices between Insurers and Banks on Blockchain to effectively track IP notices and provide immutable and valuable data around them

The system brings key stakeholders on common platform where they can view important stats around unmatched policies, policy renewals & cancellations and track the IPs in effective manner

NETTING & SETTLEMENT FOR EUROPE BASED AUTOMOTIVE ORGANIZATION

Reconciliations and Netting Settlements using blockchain. Customer is facing challenges around Reconciliation and Netting Process between its two regional units.

Scope involves blockchain implementation to transform the currently established process. Blockchain would help towards transparency, Immutability and the need for real time reconciliations and Netting Settlements

INVOICE DISCOUNTING PLATFORM FOR EUROPE BASED FINANCIAL INSTITUTION

HCL created a Blockchain based invoice discounting platform, Invochain. Invochain is an online blockchain Platform for invoice/bill discounting with features built in to reduce the risk and inefficiencies of the current process. Both banks and customers to have access to larger market.

The whole lifecycle of Bill of exchange is managed digitally on platform, right from creation of bill of exchange to getting it approved and settlement.

REFERENCE DATA MANAGEMENT FOR LEADING BANK IN SOUTH AFRICA

Reference data management using Blockchain technology. Standardization of the reference data management across bank was done to reduce errors. Solution handles the Incorrect / Inconsistent reference data due to lack of ownership leading to manual interventions, fraudulent activities and inconsistent reporting.

Integration with other critical systems like Finance, HR, Real Estate Services to ensure the process for creating, maintaining reference data carried out automatically across to prevent any manual interventions

BLOCKCHAIN KEY CUSTOMER CASE STUDIES: NON-FINANCIAL

EVIDENCE MANAGEMENT SYSTEM FOR
GLOBAL ENTERPRISE INFORMATION
MANAGEMENT FIRM

Blockchain based evidence tracking system which brings end to end traceability of every evidence through out it's lifecycle. It stores and disseminates the data on chain of custody right from the evidence collection, to storage, to lab, to court till the evidence destruction/sale etc. This leads to greater transparency into the system and reduces discrepancies.

DIGITAL TOKEN REWARD
MANAGEMENT FOR US BASED
GLOBAL AIRLINE

Created a digital token / currency for use within the organization. Token will be used for HR incentives such as work anniversaries, project performances etc. Tokens are stored in the digital wallets/mobile applications of the organization and managed on blockchain, thus infusing trust into the system

ART TRACKER FOR LEADING
FINE ARTS HANDLING
COMPANY

Blockchain based Artwork tracking system to bring end to end traceability and condition reporting of artwork through its lifecycle. This system stores and disseminates the data on chain of custody and condition reporting during creation of artwork on the portal, transportation to collectors/museums, receipt by the collector/museum.

ART CONDITION REPORT FOR
FINE ARTS HANDLING
COMPANY

Handling the condition report associated with an artwork on blockchain. The solution integrates with existing application from where the condition report is uploaded on the blockchain platform. The platform provides key functionalities on blockchain like access control based viewing and downloading the art image, condition report pdf & JSON of an artwork.

BLOCKCHAIN KEY CUSTOMER CASE STUDIES: NON-FINANCIAL

SUPPLY CHAIN MANAGEMENT FOR LEADING HITECH CUSTOMER

Supply Chain Management on CoTrust for Manufacturing & Logistics

Industry. Supply chain ecosystem suffer from larger challenges due to lack of transparency, traceability & time delays in movement of goods. Blockchain can ensures both transparency & security.

The key use cases that were built to address the major areas of problem in supply chain ecosystem are Track N Trace & Provenance of Goods, enabling product recalls in case of any defects & trade compliance management.

PATIENT DATA MANAGEMENT FOR LEADING EUROPE HEALTHCARE PROVIDER

Patient Data Management for enabling timely care on Blockchain including all the key stakeholders starting from Doctor, Hospital ,Diagnostic center, Care takers, Pharmacist.

This also provides the right over information to the patient so that he/she has full control on his information and documents. The medical history of the patient could be further used in new research.

ART INSURANCE VALUATION FOR FINE ARTS STORAGE COMPANY

Bringing Insurance Valuation an Art Collection on blockchain.

The platform bring all the key stakeholders like art collectors, underwriters, art handlers etc. on blockchain platform to efficiently manage the insurance valuation process on blockchain.

The platform provides key functionalities on blockchain like access control based viewing and downloading the associated art information and providing insurance valuation based on them.

WHY HCL

Engineering based approach towards Blockchain technology and expertise across multiple Blockchain platforms.

Holistic view by collaborating with a spectrum of players like academicians, legal experts and start-ups 3

HCL's CoTrust as an **enabler for accelerated adoption of Blockchain** in Enterprise implementations

Framework based approach to remediate the challenges associated with blockchain implementations

Experience of working in multiple Blockchain implementations across vertical domains and levels (Early stage adoption, PoC, Pilot, use case identification etc.

THANK YOU!
